

WiFi Audit Services

Don't Risk a Day of the Dead Spots!

- Identify WiFi Deadspots
- Bespoke Network Design
- Guaranteed WiFi Coverage
- Optimise Your Existing Network
- Accurate Assessment of WiFi Needs
- Save Time & Money

Predictive Survey

With an accurate floorplan, we will produce a survey report and produce a virtual picture of your building(s). The report will detail the number of access points required and their approximate placement - useful for decisions about access point purchasing and budgeting. The Predictive Survey provides a quick and cost effective estimate of your site's requirements, and minimises disruption.

Verification Survey

During an on-site visit, our team uses sophisticated equipment to perform the Verification Survey and produce a detailed report confirming the exact placement of access points and the requirements necessary. This is also useful for cabling and implementation services.

Validation Survey

We will validate the performance of a newly set-up or modified wireless system to ensure it is optimised. Using Ekahau equipment, we survey the wireless area to identify issues and make appropriate changes.

Troubleshooting / Health Check

We will visit your site to conduct the Troubleshooting WiFi Survey on your existing wireless network to identify faults and issues. We will also make recommendations to adhere to WiFi best practices and help you resolve any problems.
